

Uses case for the Children Menu

UCD 5: Children Menu Use Case Diagram.

UCD 5 Depicts a case where the user actor chooses to access the children menu to disable or enable the children doctor function of the device. The flow of the diagram depicts the user actor powering on the device (in the case of our program, running it) prompting the program to display the main menu. Displaying the main menu therefore includes powering on the device. The user then selects the children option from the main menu. The program responds by displaying the children menu. The user actor can then choose to disable the children doctor option or select an age range for the device. All children doctor settings namely; Disable, up to 1 year, 1 – 3 years, 4 – 7 years and 7 – 12 years include navigation to display the children menu.
