# Use Case for Starting Treatment

Once the user has selected a desired program or frequency, the treatment menu appears displaying power and timer. The treatment lasts for 10 minutes and exits after the treatment is over. The user can increase or decrease the power level of the device using the left and right buttons. The power level decreases by a greater percentage if the power level is higher. The timer is stopped when the electrode is removed from the skin and only begins if the electrode is touching skin.
